

## Advanced Concepts in Software Engineering

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject		Advanced Concepts in Software Engineering					
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	1	2.6 Semester	1	2.7 Evaluation type	E	2.8 Subject type	DPA/DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	3	course hours	2	seminar		laboratory	1
<b>3.2. Number of hours per semester</b>	42	course hours	28	seminar		laboratory	14
<b>3.3. Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes						24	
Supplementary study in library, on electronic platforms, on the fieldwork						12	
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays						20	
Tutoring						5	
Examinations						5	
Other activities							
<b>3.4 Total hours of individual study</b>	<b>66</b>						
<b>3.5 Total hours per semester</b>	<b>108</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	<ul style="list-style-type: none"> <li>• Introduction to Information Technology</li> <li>• Programming Languages</li> <li>• Data Structures and Algorithms</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>• Programing skills</li> </ul>

---

### 5. Facilities and equipment (where relevant)

5.1 for the course	<ul style="list-style-type: none"> <li>Overhead Projector</li> </ul>
5.2 for the course seminar	<ul style="list-style-type: none"> <li></li> </ul>
5.3 for the laboratory/project	<ul style="list-style-type: none"> <li>20 PC</li> </ul>

### 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Design appropriate software solutions, using responsible engineering approaches and applying theories and models that provide a basis for software design</li> <li>Work effectively in interdisciplinary contexts, in particular to bridge the gap between computing technology and the clients business and to interpret and respect extra-technical constraints deriving from the business organization</li> </ul>
	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

### 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>The aim of this course is to introduce the issues, basic and advanced principles of software engineering. The objectives are to develop a framework into which more detailed material regarding specific aspects of the software engineering process techniques and issues can fit, including requirements, verification, testing, validation and quality processes.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>Introduction of students to main notions of Software Engineering</li> <li>Develop the competencies to manage the software development process</li> <li>Develop the competencies to develop documentation, work in team , develop a specific product in a sound software engineering manner</li> </ul>

## 8. Content

Course	Teaching methods	Observations
<b>Software Processes</b> 1.1. Software process models 1.2. Process iteration 1.3. Process activities 1.4. Computer-aided software engineering 1.5. CMM approach	Lecturing	
<b>Requirements Engineering Processes</b> 2.1. Feasibility studies 2.2. Requirements elicitation and analysis 2.3. Requirements validation 2.4. CASE tools for requirements management 2.5. Critical system specification 2.6. Formal specification	Lecturing	
<b>Verification and Validation</b> 3.1. Planning verification and validation 3.2. Software inspections 3.3. Automated static analysis 3.4. System and component testing 3.5. Test case design 3.6. CASE tools for testing automation	Lecturing	
<b>Configuration Management</b> 4.1. Configuration management planning 4.2. Change management 4.3. Version and release management 4.4. CASE tools for configuration management	Lecturing	
<b>Software Cost Estimation</b> 5.1. Software productivity 5.2. Estimation techniques 5.3. Project duration and staffing	Lecturing	
<b>Quality Management</b> 6.1. Process and product quality 6.2. Quality assurance and standards 6.3. Quality planning 6.4. Software measurements and metrics	Lecturing

### 9. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program

- **The software engineers adopt a systematic and organised approach to their work, as this is often the most effective way to produce high-quality software. In this course the students are educated in advanced software engineering concepts that covers the entire development chain, from the business management perspective to the technical management and the development perspectives.**

### 10. Assessment

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Course Presence and Activities	Presence and Activities Evaluation	10%
	Final Examinations	Written Exam	40%
10.5 Seminar			
10.6 Laboratory/Project	Laboratory Assignment	Assignments Correction	20%
	Project	Project Evaluation	30%
10.7 Minimal standard of performance			
<ul style="list-style-type: none"><li>• <b>Minimum 50% of the marks from Laboratory/Project and Course Activities part (3 points out of 6)</b></li><li>• <b>Minimum of 50 % from final examination (2 points out of 4)</b></li></ul>			

## Game and Interactive Simulation Systems

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Game and Interactive Simulation Systems						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	1	2.6 Semester	1	2.7 Evaluation type	E	2.8 Subject type	DAP/DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	3	course hours	1	seminar		laboratory	2
<b>3.2. Number of hours per semester</b>	42	course hours	14	seminar		laboratory	28
<b>3.3.Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes							14
Supplementary study in library, on electronic platforms, on the fieldwork							
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays							42
Tutoring							
Examinations							4
Other activities							
<b>3.4 Total hours of individual study</b>	<b>60</b>						
<b>3.5 Total hours per semester</b>	<b>102</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	•
4.2 competence - related	• Programming languages

### 5. Facilities and equipment (where relevant)

5.1 for the course	• Projector
5.2 for the course seminar	•
5.3 for the laboratory/project	• Computers with performant graphic boards, human-computer interfaces, 3D glasses, VR devices

## 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Programming languages awareness for effective programming, including code, components and services creation, and integration of multiple subsystems</li> </ul>
Transversal competences	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>The course teaches students knowledge and skills necessary to develop games, interactive and Virtual Reality applications.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>The course aims to introduce: <ul style="list-style-type: none"> <li>-Familiarity with basic techniques for game design (sprites, 3D models, interactivity, reaction)</li> <li>-Usage of GameMaker Studio and Unity 5.x</li> <li>-Create 3D and VR models</li> <li>- Usage of HCI.</li> </ul> </li> </ul>

**9. Subject’s relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

- The subject introduces games and simulations development, together with problems related to human computer interfaces and real time processing. The games industry is young, but it is well develop in Romania, a leading provider of workforce in gaming industry, with employers like Ubisoft, Electronic Arts and many others. The humankind enters these years the world of full VR and experience in this field constitutes a big advantage not only on the labor market for game developers, but for software in general.

### 10. Assessment

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course			
10.5 Seminar			
10.6 Laboratory/Project	Presence Course+Laboratory	Presence list	10%
	Homework 1 GameMaker	Homework assessment (Moodle)	25%
	Homework 2 3D Application in Unity 5.x	Homework assessment (Moodle)	25%
	Project – Game or Simulation	Defending the project. Printed sample	40%
10.7 Minimal standard of performance			
50% of points			

## Programming Paradigms

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Programming Paradigms						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	1	2.6 Semester	1	2.7 Evaluation type	V	2.8 Subject type	DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	4	course hours	2	project	1	laboratory	1
<b>3.2. Number of hours per semester</b>	56	course hours	28	project	14	laboratory	14
<b>3.3. Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes							14
Supplementary study in library, on electronic platforms, on the fieldwork							
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays							10
Tutoring							2
Examinations							2
Other activities							
<b>3.4 Total hours of individual study</b>	<b>28</b>						
<b>3.5 Total hours per semester</b>	<b>84</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	<ul style="list-style-type: none"> <li>• Programming Languages</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>•</li> </ul>

### 5. Facilities and equipment (where relevant)

5.1 for the course	<ul style="list-style-type: none"> <li>• Projector, blackboard/whiteboard</li> </ul>

5.3 for the laboratory/project	<ul style="list-style-type: none"> <li>• Laboratory with computers</li> <li>• Internet connection</li> <li>• Development boards with sensors and communication</li> </ul>

---

	capabilities
--	--------------

## 6. Specific competences acquired

Professional competences	<p>Sa cunoasca limbajele de programare pentru a fi efectiv si eficient in programare, inclusiv in crearea de codice, componente si servicii, si integrarea de numeroase subsisteme</p> <p>Know programming languages in order to be effective and efficient in programming, including in creating codices, components, services and in integrating numerous subsystems</p>
Transversal competences	<p>Organize software production processes using specific tools, components and services as well as abstract elements such as software algorithms and architectures.</p>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>Understand the key elements and differences between programming languages based on syntax and semantics</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>Learn the imperative programming paradigm</li> <li>Learn the object oriented programming paradigm</li> <li>Learn the functional programming paradigm</li> <li>Learn the declarative programming paradigm</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Observations
Introduction to programming paradigms	Blackboard, projector,	2
Abstract machines	Moodle	2
Memory management		2
Data abstraction		2
Control abstraction		2
Imperative programming - Java		4
Object Oriented programming– Java		4
Functional programming– Scala		6
Declarative programming- Prolog		4

### Bibliography

1. C. Horstmann, G. Cornell, “Core Java 2”
  2. J. Bloch, C. Persuati, “Effective Java”
  3. S. McConnell, “Code Complete”
  4. M. Gabrielli, S. Martini, “Programming Languages: Principles and Paradigms”
- A.V. Aho “Compilers: Principles, Techniques and Tools”

8.2 Project	Teaching methods	Observations
<b>Implement a complex software project that uses three programming paradigms (imperative, functional, declarative)</b>	Moodle, individual work at computer	
<b>8.3 Laboratory</b>		

Java introduction		2 hours
Variables		2 hours
Methods		2 hours
Object Oriented Programming		4 hours
Scala introduction		2 hours
Recursivity in Scala		4 hours
Generic types in Scala		2 hours
Lists, sets in Scala		2 hours
Pattern matching in Scala		2 hours
Prolog introduction		2 hours
Inferences in Prolog		2 hours
Recursivity, lists in Prolog		2 hours

### **Bibliography**

1. C. Horstmann, G. Cornell, "Core Java 2"
  2. J. Bloch, C. Persuati, "Effective Java"
  3. S. McConnell, "Code Complete"
  4. M. Gabrielli, S. Martini, "Programming Languages: Principles and Paradigms"
- A.V. Aho "Compilers: Principles, Techniques and Tools"

### **9. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

- The course and laboratory were prepared after extensive study of similar programs offered by prestigious universities and adapted to be integrated in the current study program.

### **10. Assessment**

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Knowing the theory	Written exam	40
10.5 Project	Implement a software project that uses the three paradigms	Present in class	30
10.6 Laboratory/Project	Attendance + homework + activity	Oral examination	30
10.7 Minimal standard of performance			
<ul style="list-style-type: none"> <li>• Achieve over 50% in score at the final exam</li> <li>• Present the project before the exam</li> </ul>			

## Formal Models in Software Engineering

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Formal Models in Software Engineering						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	3	2.6 Semester	1	2.7 Evaluation type	C	2.8 Subject type	DPA/DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	3	course hours	1	seminar	1	laboratory	1	
<b>3.2. Number of hours per semester</b>	42	course hours	14	seminar	14	laboratory	14	
<b>3.3. Distribution of spend time:</b>								<b>h.</b>
Study of textbooks, bibliography and course notes						20		
Supplementary study in library, on electronic platforms, on the fieldwork						10		
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays						10		
Tutoring						3		
Examinations						3		
Other activities								
<b>3.4 Total hours of individual study</b>	<b>66</b>							
<b>3.5 Total hours per semester</b>	<b>108</b>							
<b>3.6 Number of credits</b>	<b>4</b>							

### 4. Preconditions (where relevant)

4.1 curriculum- related	<ul style="list-style-type: none"> <li>• Introduction to Information Technology</li> <li>• Data Structures and Algorithms</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>•</li> </ul>

### 5. Facilities and equipment (where relevant)

5.1 for the course	<ul style="list-style-type: none"> <li>• Overhead Projector</li> </ul>
5.2 for the course seminar	<ul style="list-style-type: none"> <li>•</li> </ul>
5.3 for the laboratory/project	<ul style="list-style-type: none"> <li>• 20 PC</li> </ul>

## 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Apply design and development methods and techniques as appropriate to realize solutions along the whole life-cycle of the software product</li> </ul>
	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>Scientific foundations for software engineering depend on the use of precise, abstract models for characterizing and reasoning about properties of software systems. This course considers many of the standard models for representing sequential and concurrent systems, such as grammars, automata, state machines, formal models in Spin and Promela. It shows how different logics can be used to specify properties of software systems, such as functional correctness, deadlock freedom, and internal consistency. Concepts such as composition mechanisms, abstraction relations, invariants, non-determinism, inductive definitions, operational and denotational descriptions are recurrent themes throughout the course.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>How to use formal specification methods in software development</li> <li>Formal reasoning on program correctness</li> <li>Modeling and formal specification of software activities .</li> </ul>

## 8. Content

Course	Teaching methods	Observations
<b>Foundations</b> 1.1. What's a formal model? 1.2. Logic and Proof Techniques 1.3. Sets, Relations, Maps, Functions 1.4. Graphs 1.5. Abstract Data Types	Lecturing	
<b>Languages</b> 2.1. Formal Systems 2.2. Grammars and Languages 2.3. Semantics Specifications 2.4. Automata and Languages	Lecturing	
<b>State Machine</b> 3.1. Basic Concepts 3.2. Variations of State Machines	Lecturing	
<b>Models of Computing Systems</b> 4.1. Introduction to Spin Promela 4.2. Formal Modelin in Promela 4.3. Verification and Validation in Spin/Promela 4.4. The Vienna Development Method 4.5. Operational vs. denotational semantics in VDM	Lecturing

4.1 curriculum- related	<ul style="list-style-type: none"> <li>Java programming, C++, Python, SQL</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>Architecture of Enterprise Information Systems, Business Intelligence</li> </ul>

### 5. Facilities and equipment (where relevant)

5.1 for the course	<ul style="list-style-type: none"> <li>Overhead projector, internet connection</li> </ul>
5.2 for the course seminar	<ul style="list-style-type: none"> <li>Workstations min 8 GB RAM</li> </ul>
5.3 for the laboratory/project	<ul style="list-style-type: none"> <li>LAN between workstation to make a distribute cluster</li> </ul>

## 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Programming languages awareness for effective programming, including code, components and services creation, and integration of multiple subsystems</li> </ul>
Transversal competences	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>Familiarize the student with a framework for storing, processing and analyzing “Big Data”</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>Learn concepts about Hadoop Distributed File System and related concepts, applications and languages, including NoSQL</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Observations
What is Big Data – Use Cases and Intro to Apache Hadoop	Instructor Led Training	In class, Live Virtual Class
The Hadoop Ecosystem		
Writing a MapReduce Program in Java		
Delving Deeper into the Hadoop API		Combiner, Distributed cache
Practical Development Tips and Techniques		Strategies for debugging MapReduce code
Partitioners and reducers		Writing custom Partitioners
Common MapReduce Algorithms		How to sort, search, index and compute TF-IDF
Hadoop Tools for Data Acquisition		Use Sqoop and Flume
Introduction of NoSQL & Spark		Overview of NoSQL concepts and the Apache Spark framework
Features for data acquisition, storage and analysis		Usage of Pig and Hive
Multi Dataset operations with Pig		Usage of grouping, combining, join, concatenating and splitting
Introduction to Hive		How does Hive differ from RDBMS?
Text processing with Hive		Emphasize the need to analyze unstructured and semi-structured data
Introduction to Impala		How to achieve a trade off between high speed and cost for interactive/ad hoc queries in data analysis

Macdonald, 1-st Edition, Oracle Press 2013, ISBN-13: 978-0071827263</li> </ol>		
<b>8.2 Seminar</b>	<b>Teaching methods</b>	<b>Observations</b>
<b>8.3 Laboratory</b>		
Using HDFS		
Running a MapReduce Job		
Writing a MapReduce Java and Streaming Programs and Testing with MRUnit framework		
Using ToolRunner and Passing Parameters; using a Combiner		
Testing with LoalJobRunner, Logging and using Counters and a Map-Only Job		
Writing a Partitioner, implementing a Customr WritableComparable and using SequenceFiles and File Compression		
Creating an Inverted Index and calculating Word Co-Occurance		
Running an Oozie Workflow and exploring a Secondary Sort Example		
Using Pig for ETL Processing and Analyzing Ad Campaign Data with Pig		
Analyze Disparate Data Sets with Pig and extend Pig with Streaming and UDFs		
Running Hive Queries from the Shell, Scripts and Hue and performing Data Management with Hive		
Gaining Insight with Sentiment Analysis and Transforming Data with Hive		
Interactive Analysis with Impala		
<b>Bibliography</b>

**9. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

- BigData is the emerging domain dealing with the global digital disruption, at the confluence of Language programming in distributed systems, Business Intelligence/Advanced Analytics, Data Modeling and Statistics. With use cases in most activity fields, Big Data is the new paradigm in Information Systems
- Big Data is one of the 4 pillars for Horizon 2020 Research program of EU
- Mc Kinsey mentions a shortage of 140000-190000 people with deep analytical skills in US only
- UEFISCDI has established in 2013 that Big Data is one of the strategic directions for research in Romania

**10. Assessment**

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Knowledge of the courseware content	Quiz of 30 questions randomly chosen from a datanase of 150 questions	70%
10.5 Seminar			
10.6 Laboratory/Project	Completion of two home assignments	Achievement of the two home assignments is a precondition to enter the final evaluation test	30%
10.7 Minimal standard of performance			
<ul style="list-style-type: none"> <li>• 50% correct answer to the final Quiz</li> </ul>			

## Model Driven Software Engineering

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Model Driven Software Engineering						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	1	2.6 Semester	2	2.7 Evaluation type	E	2.8 Subject type	DAP/DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	3	course hours	2	seminar	-	laboratory	1
<b>3.2. Number of hours per semester</b>	42	course hours	28	seminar		laboratory	14
<b>3.3.Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes						12	
Supplementary study in library, on electronic platforms, on the fieldwork						8	
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays						14	
Tutoring						4	
Examinations						4	
Other activities							
<b>3.4 Total hours of individual study</b>	<b>42</b>						
<b>3.5 Total hours per semester</b>	<b>84</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	•
4.2 competence - related	• Object oriented modeling

### 5. Facilities and equipment (where relevant)

5.1 for the course	• Room with video projector
5.2 for the course seminar	•
5.3 for the laboratory/project	• Computer laboratory

## 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Apply design and development methods and techniques as appropriate to realize solutions along the whole life-cycle of the software product</li> </ul>
Transversal competences	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>The general goal is to show that models have overtaken their declarative role in software development and have become imperative in certain contexts, being used for driving applications, similarly as programs, but at a higher level of abstraction.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>Present metamodels as languages for defining models</li> <li>Describe software architectures specific for rendering the models executable</li> <li>Show the possibilities to transform and compose models and metamodels.</li> <li>Prove that software development may be leveraged by using various models, metamodels, languages, by getting familiar with the definition and interpretation of models</li> <li>Define metamodels and generating editors corresponding to them</li> <li>Familiarize the student with some software development environments that support MDE.</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Observations
Principles of Model Driven Engineering	- Presentation on slides	
Model Driven Architecture and standards	- Discussions	
UML Metamodel and the possibility to extend it with profiles	- Formative tests	
Metamodeling Languages: MOF, Ecore, XMF, GME language		
Domain Specific Languages		
Software Environments for Modeling and Metamodeling		
Using DSLs in Product Line Architecture.		

Generative Programming.		
Using workflow models in Service Oriented Architectures		
Separation of concerns. Domain Models		
Types of model transformations		
Model markers and annotations		
Automatic code generation		
Composing models and metamodels

8.2 Seminar	Teaching methods	Observations
<b>8.3 Laboratory</b>		
Study examples of models and metamodels, in order to understand the necessity of metamodeling	<ul style="list-style-type: none"> <li>- Explanations at the beginning of the laboratory</li> <li>- Assisted individual work</li> <li>- Study of examples</li> <li>- Use of a predefined structure for the specifications</li> <li>- Homework verification and evaluation</li> </ul>	
Define models starting from a given metamodel		
Define a metamodel (DSL) for a given application domain		
Use a metamodeling environment for defining a metamodel and generating an editor of models conforming to it		
Configure the metamodel interpreter		

**Bibliography**

GME Manual and User Guide, 2000-2014 Vanderbilt University

**9. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

- The content is aligned to the specifications adopted by an international industrial standards consortium (OMG) and to the competencies required by software companies. Apart from general modeling languages, the course also approaches domain specific languages, which are used in many industrial settings based on product lines.

**10. Assessment**

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Specific criteria for each question of the examination	Final verification (exam)	40
10.5 Seminar			
10.6 Laboratory/Project	All the indicated topics approached Coherent concepts and relationships	Evaluation of a case study	10
	Executable modeling paradigm Correspondence between the case study and the model conforming to the modeling paradigm Specific concrete syntax defined	Verification of individual work and evaluation of the customized modeling paradigm	30
	Marks for participation to the class activities	Average of marks	10
	Evaluation of the configuration for a given modeling paradigm	Laboratory test	10
10.7 Minimal standard of performance			
<ul style="list-style-type: none"> <li>• Accumulation of minimum 50 points</li> </ul>

## 5. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>• Apply design and development methods and techniques as appropriate to realize solutions along the whole life-cycle of the software product</li> <li>• Programming languages awareness for effective programming, including code, components and services creation, and integration of multiple subsystems</li> </ul>
Transversal competences	<ul style="list-style-type: none"> <li>• Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>• Organize and lead development teams, including team-building and negotiation</li> <li>• Serve as an agent of change for introducing new technology</li> </ul>

## 6. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>• Learning and integrating the main concepts, principles, models, and techniques related to distributed program systems development. Capability to use this knowledge in modeling, design of software components for distributed systems. Implementing middleware programs using current technologies. Evaluation how the developed systems satisfy the specification criteria and performance optimization by using specific instruments and engineering methods.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>• Study actual problems in the domain of distributed processing over computer networks.</li> <li>• Research new solutions to solve complex problems in distributed systems, related to assuring interprocess communication, data replication for increasing performance, ensuring consistency, fault tolerance, and security in Web based systems.</li> <li>• Study heterogeneous systems based on objects, mobile networks and mobile agents.</li> <li>• Acquire practical abilities needed for the design, implementation, and evaluation of distributed systems components.</li> </ul>
	<ul style="list-style-type: none"> <li>• Identification of concrete problems related to actual distributed systems and finding high performance solutions.</li> <li>• Effective use of design and implementation instruments for distributed systems.</li> <li>• Deployment, exploitation, and maintenance of distributed system programs.</li> </ul>

## 7. Content

8.1 Course	Teaching methods	Observations
------------	------------------	--------------

Introduction. Models and architectures of dynamic large scale distributed systems (client-server, service oriented, peer-to-peer and others). Specific design requirements: scalability, transparency, and performance.	Face to face teaching	<p>The course provides teaching, supplemented by discussing recommended paper in class. Course teaching is done with PPT presentations. For paper discussions, papers are made accessible on the course site. Students will shortly present personal opinions about the papers under discussion.</p> <p>On course site are provided:</p> <ul style="list-style-type: none"> <li>- teaching materials (presentation slides)</li> <li>- fragments from books and papers authored by the teacher</li> <li>- papers to be discussed in the class</li> <li>- information about course administration</li> <li>- information about the points acquired by students during the semester</li> <li>- discussion forum.</li> </ul>
P2P Systems. Internet Architectures and technologies for content distribution (client/server, multicast, P2P). Search services, hash tables. Search and download performance in P2P Systems. Gossip protocols. P2P streaming. Dynamic scalable efficient content replication techniques. Anonymity. Reputation management in P2P systems. Self-* properties in P2P systems.		
Event driven distributed systems. Architectures, components. Complex event processing, detecting events templates. ECA (event, condition, action) and finite state machines with interval timestamps. Intelligent engines for event processing. Events and increasing reactivity of RIA (Rich Internet Applications). Event based Collaborative Applications.		
Cloud computing. Resource provisioning. Optimizing resource use. Energy management. Traffic management. Data Security. Software frameworks for performance optimization. Storage Technologies and data management. Data and computation intensive models: MapReduce.		
Context based distributed systems. Context information sensing, transmission, and processing. Context models; ontology-based models. Context based autonomous systems. Resource discovery. Historical context data. Security and privacy.

### 8. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program

- Practical development of software requires an understanding of successful methods for bridging the gap between a problem to be solved and a working software system. This course focuses specifically on methods that guide the software engineer from requirements to code. For this it presents the most known software methodologies, that is those knowledge realms created around a development paradigm and formed from methods, techniques, rules, postulates, and tools to be used for software fabrication. They guide the software engineer in software development process from requirements identification to code generation and validation.

### 9. Assessment

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Written examination	Questions of theoretical knowledge	30%
		Solving practical exercises	30%
10.5 Seminar			
10.6		Homework	20%

Laboratory/Project		Mini-project	20%
10.7 Minimal standard of performance			
<ul style="list-style-type: none"><li>• Exam admission criterium : only with a higher grade of 4</li><li>• Exam promotion with the final grade at least 5</li></ul>			

## Computing in the Semantic Web

### 1. Information about the program

1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Computing in the Semantic Web						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	1	2.6 Semester	2	2.7 Evaluation type	E	2.8 Subject type	DPA/DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	3	course hours	2	seminar	0	laboratory	1
<b>3.2. Number of hours per semester</b>	42	course hours	28	seminar	0	laboratory	14
<b>3.3. Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes	10						
Supplementary study in library, on electronic platforms, on the fieldwork	10						
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays	7						
Tutoring	10						
Examinations	3						
Other activities							
<b>3.4 Total hours of individual study</b>	<b>40</b>						
<b>3.5 Total hours per semester <sup>1</sup></b>	<b>82</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	<ul style="list-style-type: none"> <li>• Database, HTML, algorithm design, web services</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>•</li> </ul>

---

## 5. Facilities and equipment (where relevant)

5.1 for the course	•
5.2 for the course seminar	•
5.3 for the laboratory/project	•

## 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>• Apply design and development methods and techniques as appropriate to realize solutions along the whole life-cycle of the software product</li> <li>• Programming languages awareness for effective programming, including code, components and services creation, and integration of multiple subsystems</li> </ul>
	<ul style="list-style-type: none"> <li>• Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>• Organize and lead development teams, including team-building and negotiation</li> <li>• Serve as an agent of change for introducing new technology</li> </ul>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	Designing and implementing semantic web applications aligned with the vision of "linked data" - perceived as the main evolution of the current social web.
7.2 Specific objectives	<p>For course:</p> <ul style="list-style-type: none"> <li>- The semantic web is seen as a collection of accessible information that can be organized and used at a semantic level instead of using it at the syntactic and structural level. The course describes both a new generation of web standards and applications that have the ability to represent and use the semantics of specific information as well as the technologies needed to build such applications. The course will address the understanding of the Semantic Web from three perspectives: the theoretical aspects of information organization such as ontologies, taxonomies and semantic data modelling; aspects of understanding and creating information networks, and application-</li> </ul>

	<p>centered Web services semantics, semantic services for the business process, APIs and mashups.</p> <p>For applications:</p> <ul style="list-style-type: none"> <li>- The applications aim at building ontologies and writing the code that accesses them; representing XML data with appropriate semantic markings, which are obtained or derived from ontology; describing semantic relations between these elements using RDF and OWL; developing an application that discovers data and/or Web services based on semantic criteria.</li> </ul>

**9. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

Technologies for the semantic web are an important factor for processing information from the web, which today is very important in the success of many industrial, commercial enterprises. The course offers students the opportunity to get acquainted with such techniques and information processing from the web, a fact that is very important at the moment.

## 9. Subject's relevance to the epistemic community, professional associations and representative employers in fields significant for the program

- Computer Network is a building block for the building of a software system. Any modern computational system is mostly in a distributed form and it uses the network capabilities for the well-functioning of the

software. Therefore, skills acquired during this course represents an important building block for the making of software systems.

### 6. Specific competences acquired

--

Professional competences	Work effectively in interdisciplinary contexts, in particular to bridge the gap between computing technology and the clients business and to interpret and respect extra-technical constraints deriving from the business organization
Transversal competences	Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures Organize and lead development teams, including team-building and negotiation Serve as an agent of change for introducing new technology

#### 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	The course is designed to provide detailed insight into the management methods and responsibilities involved in project management specific to software development. The course is dedicated to students who want to develop specific skills, styles and approaches in this area. The laboratory performs practical examples according to (and synchronized) with the material taught at the course. In addition to being able to analyze homework issues, the lab offers the opportunity for students to work in an organized setting, to a joint project, in teams formed at random, and to contribute to interactive debates on different approaches in the structure of some teams and / or in the design / implementation technique of certain projects.
7.2 Specific objectives	Through this discipline it is desired to understand clearly the problems, the success factors and the risks associated with the development of the projects in the software field, the details of the stages and processes within the life cycle of a project as well as the planning and management techniques of a project software.

<b>8.3 Laboratory</b>		

<p>The laboratory as a whole</p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Presentation of a case study</li> <li>• Overview of Project Management</li> <li>• The organizational structure of the case study</li> <li>• Planning phase</li> <li>• Interactive choice of a life model for the case study</li> <li>• Estimates and Budget</li> <li>• Choosing a budgeting model</li> <li>• Project planning</li> <li>• Flow of project flow</li> <li>• Case study diagrams</li> <li>• Risk and change management</li> <li>• Risk management</li> <li>• Risks for the case study</li> </ul>	<p>Individual, theoretical and practical activity; design and teamwork problems, low and medium complexity</p>	
<p><b>Bibliography</b> Same as the course</p>		

**9. Subject’s relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

<ul style="list-style-type: none"> <li>• Project Management is a very important part of any software development enterprise. The course prepare the students with the necessary skills and knowledge for the positions of team leaders, project managers, senior managers. etc.</li> </ul>
--

**10. Evaluation**

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Problem solving correctness	Written exam	40%
	Presentation of scientifically papers	Oral evaluation	15% (extra)
10.5 Seminar			
10.5 Laboratory/Project	Project development	Project work during semester	20%
	Project success	Final project evaluation, normalized using the team and personal marks	25%
10.7 Minimal standard of performance			
<ul style="list-style-type: none"> <li>• <b>Minimum 50% of the marks from Seminars Assignments and Course Activities part (3 points out of 6)</b></li> <li>• <b>Minimum of 50 % from final examination (2 points out of 4)</b></li> </ul>			

## Agent-Oriented Software Engineering

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Agent-Oriented Software Engineering						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	6	2.6 Semester	2	2.7 Evaluation type	E	2.8 Subject type	DAP

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	4	course hours	2	seminar	1	laboratory	1
<b>3.2. Number of hours per semester</b>	56	course hours	28	seminar	14	laboratory	14
<b>3.3.Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes							
Supplementary study in library, on electronic platforms, on the fieldwork							
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays							
Tutoring							
Examinations							
Other activities							
<b>3.4 Total hours of individual study</b>	<b>50</b>						
<b>3.5 Total hours per semester <sup>1</sup></b>	<b>106</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	•
4.2 competence - related	•

<sup>1</sup> Numărul total de ore nu trebuie să depășească valoarea (Număr credite) x 27 ore

## 5. Facilities and equipment (where relevant)

5.1 for the course	•
5.2 for the course seminar	•
5.3 for the laboratory/project	•

## 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Apply design and development methods and techniques as appropriate to realize solutions along the whole life-cycle of the software product</li> </ul>
Transversal competences	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>Acquiring theoretical and practical knowledge about intelligent agents and multi-agent systems</li> <li>Studying agent types and multi-agent types</li> <li>Presenting the reasoning methods for intelligent agents</li> <li>Presenting the distributed planning methods for MAS, the coordination mechanisms and elements of agent oriented programming</li> <li>Studying development methods for applications based on the multi-agent paradigm</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>Developing applications based on intelligent agents</li> <li>Abilities for the design and development of multi-agent systems</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Observations
Introduction <ul style="list-style-type: none"> <li>Agents and Multi-Agent Systems</li> <li>Cognitive and Reactive Agent</li> </ul>	Face to face teaching	Bibliographic materials are used.

<p>Architectures</p> <ul style="list-style-type: none"> <li>• Languages and communication protocols for MAS</li> </ul> <p>Coordination</p> <ul style="list-style-type: none"> <li>• Coordination in solving tasks</li> <li>• Distributed planning in MAS</li> <li>• Negotiating techniques and protocols</li> </ul> <p>Specific Applications</p> <ul style="list-style-type: none"> <li>• Agent oriented programming</li> </ul> <p>MAS Platforms</p> <ul style="list-style-type: none"> <li>• Multi agent systems applications</li> </ul>

<ul style="list-style-type: none"><li>• Obtaining minimum 50% of the final exam</li><li>• Attending at least 5 laboratory sessions</li></ul>			

## Special Topics in Software Engineering

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Special Topics in Software Engineering						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	2	2.6 Semester	1	2.7 Evaluation type	E	2.8 Subject type	DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	2	course hours	1	seminar		laboratory	1
<b>3.2. Number of hours per semester</b>	28	course hours	14	seminar		laboratory	14
<b>3.3. Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes							14
Supplementary study in library, on electronic platforms, on the fieldwork							10
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays							14
Tutoring							2
Examinations							2
Other activities							
<b>3.4 Total hours of individual study</b>	<b>42</b>						
<b>3.5 Total hours per semester <sup>1</sup></b>	<b>70</b>						
<b>3.6 Number of credits</b>	<b>3</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	<ul style="list-style-type: none"> <li>• Programming Languages, Computer Networks</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>•</li> </ul>

### 5. Facilities and equipment (where relevant)

5.1 for the course	<ul style="list-style-type: none"> <li>• Projector, blackboard/whiteboard</li> </ul>
5.2 for the course seminar	<ul style="list-style-type: none"> <li>•</li> </ul>
5.3 for the laboratory/project	<ul style="list-style-type: none"> <li>• Laboratory with computers</li> <li>• Internet connection</li> <li>• Development boards with sensors and communication</li> </ul>

<sup>1</sup> Numărul total de ore nu trebuie să depășească valoarea (Număr credite) x 27 ore

	capabilities
--	--------------

## 6. Specific competences acquired

Professional competences	Design software solutions using responsible engineering approaches. Apply theories and models in the design process
Transversal competences	<p>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures.</p> <p>Organize and lead development teams, including team-building and negotiation</p> <p>Serve as an agent of change for introducing new technology</p>

## 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>Study the Internet of Things paradigm, using intelligent devices in complex information systems</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>Knowing the Internet of Things paradigm</li> <li>Learning specific protocols for machine-to-machine communication</li> <li>Developing applications on development boards using sensors and actuators</li> <li>Connecting smart devices to the Internet</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Observations	
Introduction to IOT, Networks, Taxonomy, Examples	Blackboard, projector, Moodle	1	
IOT systems architecture		1	
Development boards, Capabilities, Programming		2	
Analog and digital sensors		1	
Actuators		1	
Serial communication protocols		1	
Machine-to-machine communication in wireless networks		1	
Low-energy communication		1	
Using cloud services		1	
Connecting to smartphone applications		2	
Digital signal processing on development boards		2	
<b>Bibliography</b>			
8.2 Seminar		Teaching methods	Observations
	Moodle, individual work at		

<b>8.3 Laboratory</b>	computer	
Programming Arduino (or similar) development boards		<b>2</b>
Programming Raspberry Pi (or similar) development boards		<b>2</b>
Reading digital and analog sensor data		<b>2</b>
Serial communication (SPI, I2C)		<b>1</b>
<b>Bibliography</b>		
<ul style="list-style-type: none"> <li>• „Collaborative Internet of Things (C-IoT): for Future Smart Connected Life and Business”, Fawzi Behmann, Kwok Wu, ISBN: 978-1-118-91374-1, 2015</li> <li>• The Internet of Things: Key Applications and Protocols, 2nd Edition, Olivier Hersent, David Boswarthick, Omar Elloumi, ISBN: 978-1-119-99435-0, 2012</li> <li>• „Professional Android Sensor Programming”, Greg Milette, Adam Stroud, ISBN: 978-1-118-18348-9, 2012</li> <li>• „Raspberry Pi 3: Beginner to Pro – Step by Step Guide”, Timothy Short, 2016</li> <li>• „Beginning Sensor Networks with Arduino and Raspberry Pi”, Charles Bell, ISBN-13: 978-1430258247, 2013</li> </ul>		

**9. Subject’s relevance to the epistemic community, professional associations and representative employers in fields significant for the program**

<ul style="list-style-type: none"> <li>• The course and laboratory were prepared after extensive study of similar programs offered by prestigious universities and adapted to be integrated in the current study program.</li> </ul>
--

**10. Assessment**

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Weight in final grade
10.4 Course	Knowing the theory	Written exam	40
	Solving a programming task		
10.5 Seminar			
10.6 Laboratory/Project	Attendance + homework + activity	Oral examination	30
	Programming tests	Written test during the laboratory	30
10.7 Minimal standard of performance			
<ul style="list-style-type: none"> <li>• Knowing basic theory ( IOT architectures, fundamental protocols )</li> <li>• Designing of IOT systems for satisfying requirements presented in natural language.</li> </ul>			

## Software Testing

### 1. Information about the program

1.1 Higher education institution	University POLITEHNICA of Bucharest
1.2 Faculty	Faculty of Engineering in Foreign Languages
1.3 Department	Department of Engineering in Foreign Languages
1.4 Field of study	Computers and Information Technology
1.5 Study cycle	Master
1.6 Program / Qualification	Software Engineering

### 2. Data about the subject

2.1 Name of subject	Software Testing						
2.2 Course holder							
2.3 Seminar holder							
2.4 Laboratory/project holder							
2.5 Year of study	1	2.6 Semester	1	2.7 Evaluation type	C	2.8 Subject type	DPA/DO

### 3. Estimated time (hours per semester) of didactic activities

<b>3.1 Number of hours per week</b>	3	course hours	2	seminar	0	laboratory	1
<b>3.2. Number of hours per semester</b>	42	course hours	14	seminar	0	laboratory	14
<b>3.3.Distribution of spend time:</b>							<b>h.</b>
Study of textbooks, bibliography and course notes	20						
Supplementary study in library, on electronic platforms, on the fieldwork	20						
Preparation of seminars/laboratories, home assignments, papers, portfolios, essays	10						
Tutoring	3						
Examinations	3						
Other activities							
<b>3.4 Total hours of individual study</b>	<b>66</b>						
<b>3.5 Total hours per semester <sup>1</sup></b>	<b>108</b>						
<b>3.6 Number of credits</b>	<b>4</b>						

### 4. Preconditions (where relevant)

4.1 curriculum- related	<ul style="list-style-type: none"> <li>• Introduction to Information Technology</li> <li>• Data Structures and Algorithms</li> </ul>
4.2 competence - related	<ul style="list-style-type: none"> <li>•</li> </ul>

<sup>1</sup> Numărul total de ore nu trebuie să depășească valoarea (Număr credite) x 27 ore

### 5. Facilities and equipment (where relevant)

5.1 for the course	<ul style="list-style-type: none"> <li>Overhead Projector</li> </ul>
5.2 for the course seminar	<ul style="list-style-type: none"> <li></li> </ul>
5.3 for the laboratory/project	<ul style="list-style-type: none"> <li>20 PC</li> </ul>

### 6. Specific competences acquired

Professional competences	<ul style="list-style-type: none"> <li>Apply design and development methods and techniques as appropriate to realize solutions along the whole life-cycle of the software product</li> </ul>
	<ul style="list-style-type: none"> <li>Understand and be able to use specific tools, components, and frameworks and also abstract elements such as algorithms and architectures</li> <li>Organize and lead development teams, including team-building and negotiation</li> <li>Serve as an agent of change for introducing new technology</li> </ul>

### 7. Course objectives (as resulting from the grid of specific competences)

7.1 Subject general goal	<ul style="list-style-type: none"> <li>Scientific foundations for software engineering depend on the use of precise testing methodology for checking the correctness of a software under test. This course aims to bring the student the information regarding rigorous testing starting with test planning, functional and non-functional testing strategies, conformance standardisation testing, automatic test generation, test reporting and debugging, etc.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>How to use formal specification methods in software development for checking the correctness of a specification</li> <li>How to develop test planning and do test reporting</li> <li>How to use different strategies for effective testing.</li> </ul>

## 8. Content

Course	Teaching methods	Observations
<ul style="list-style-type: none"> <li>• Background knowledge</li> <li>• Use of probabilities in testing</li> <li>• Design phases: Testing the design – Formal methods</li> <li>• Planning for testing</li> <li>• Static testing: Audits, Interviews</li> <li>• Detailed Design and Coding, Transfer and Maintenance phases: Main Testing Methodologies</li> <li>• Non-functional Testing</li> <li>• Automatic test derivation</li> <li>• Standardisation testing conformance</li> <li>• Reporting the results</li> </ul>	Lecturing
